To: ham-policy@ucsd.edu

I'm currently in the process of studying for my license exam and I happened
to show a friend some books that described what amateur radio is all about.
Now the interesting thing is that he's deaf (hearing impaired, if you prefer).
After reading some of the information, he's interested in giving it a try.
His main interest was packet and although he can gain access to this via
the no-code exam, what about upgrading? Obviously he can't pass a
conventional CW test, how does the FCC handle this?

Thanks in advance for any replies...
Rob

>The best thing about opinions is that everyone has one. Here are mine:

Yes. And I found yours interesting (I was tempted to say enlightening but that might have been misunderstood.)

>IMHO, a once in a lifetime 13 WPM code test won't keep out the lids. Nothing
>will keep out all the lids. A recurrent code requalification test would
probably,
>IMO, reduce the lid count substantially. I base this on the fact that among
those
>that operate CW on a regular basis I have found less lids than on the phone
>portion of the band. Could be because it is easier to call somebody a clueless
>a**hole on phone than on CW. Not that I haven't heard the little used MF and
>FU LID prosings on CW, but not nearly as much as on SSB.

Here I could not agree more. If the purpose of the morse tests is a lid
filter, maybe for other reasons, periodic testing (every 2 years? 5?) on a
pass/fail basis should be a requirement. Including current license
holders.

>Allocations and band edges are rules issues and the safety issues are one of
>the biggest laughs on the tests today. We tell people to tilt their handhelds
>away from their heads while using the hambands, then the same people
>stick an 800 MHz flip fone antenna in their ears. "I don't have to worry
>about safety, it's a cell phone not a ham radio."

Let me take this one piece at a time. Memorizing band edges does nothing.
Many hams (newer ones) that operate HF use the charts that the ARRL and
others publish while they operate. Memorizing bands is just that,
memorization for the purpose of memorization.

Safety issues are a joke, agreed totally. That area need drastic
improvement. Increasing the question pool significantly and adding
questions to the exams to cover it. Particularly in the Novice, Tech and
General pools.

>I don't understand what more could you want? You can already operate most
>of the available bandwidth without having to learn the code.

Ok, VE Privileges. Licensee of a space station. Not to mention the fact
that the 50Mhz plus spectrum is fundamentally different from the 30Mhz

minus spectrum.

>>The points in these posts build down to basically "I had to so you have to"
>>or "why gripe and whine, it isn't that hard". What you completely fail to
>>realize (or refuse to realize?) is that that is not the point. You miss the
>>whole argument by at least a thousand miles. The purposes of the ARS are
>>clearly expressed in Part 97. Nothing, IMO, supports the current high
>>speed manual morse testing, especially on a pass/fail basis.

>

>No it boils down to "I loved to, why don't you?".

Thank you for stating it. (By the way, I just can't see the utility of it.)

>Part of the ARS was to keep a pool of train operators. IMHO, that means
>CW operators because voice operators could be easily found or trained
>whereas a CW op is a valuable and trained entity, a craftsman so to speak.

But almost nowhere is there a need for such a pool outside the ARS. If there is no need for the pool, we serve no purpose. Glass blowing is a craft too. We do not need a large pool of glass blowers. Technology has progressed beyond that need.

>Furthermore, it really makes no sense to pass a CW test to get access
>to band segments where nobody is working CW.

I promise you that if the automated digital chirpers continue their downward trek they will force the CW ops to start exercising their privilege to operate **anywhere** in the bands; this will result in there no longer being ``...band segments where nobody is working CW.''

These chirping crickets have moved **below** the national QRP CW frequency of 7040 kc now.

After wading thru the waist deep pile of human excrement of this post, or
should I say flame as there is no redeeming quality, it only goes to
further the arguement that morse testing is no lid filter.

It also shows that one can obtain a Doctorite without the ability to
demonstrate intelegence let alone the ability to read.

Since you missed it Doctor (and BOY do I use that term loosely!) many of
those posting here for removal of the pass/fail high speed tests are
Extra class licensees and have passed the 20 WPM test.

Since you CLAIM (delusions perhaps?) that you have "followed" this group (obviously at a distance) for "some time" (Seconds? Minutes? or even [gasp!] HOURS?) you should have known this. We can assume that your reading skills lie somewhere below the third grade level then?

We can thus safely presume that your Phd was in Creative Basket Weaving?

That's OK, even the lazy bastards that refuse to read posts are free to respond on Usenet. And I for one will lay down my life to protect your First Amendment rights to do so (this applies to US residents of course, no offense to those in other countries).

You are a "no-clue" and you whine about HF!

I doubt that since he has supported the opposite many times.

But we expect that from a "no-clue" like you Mr. Deignan.

Are you one of the "many" who have passed the 20 WPM test, and thus earned
their Extra class license? If so, then you have just qualified your
arguments against the code requirement. If not, you are a whiner. Period.

Boy, I remember that - we'd get all the network programs one week
later than you folks (including our own Hawaii 5-0) - finally
in the late 70's we received the networks live.

ALL operators that I know who use those modes (and all I have heard of) use store bought equipment. One is the head tech guy for a major 2-way radio company around here and knows more about radio than most everyone I have seen on this group.
